## Non-operative Protocol for OCD Lesions of the Knee

### **PHASE I**

- Knee Immobilization or Unloader Brace for 4-6 weeks
- Crutch Protected, Partial Weight Bearing Gait

### **PHASE 2**

Patient should be Pain-free and XR performed to progress to Phase 2

- Weight Bearing as Tolerated without Immobilization
- Start PT
  - ROM / Low-Impact Quadriceps and Hamstring Strengthening
- Sports / Repetitive-impact activities - **RESTRICTED**

### **PHASE 3**

Typically about 3-4 months after treatment starts

Radiographic & Clinical Signs of Healing - MRI may be necessary

- Supervised initiation of running, jumping, cutting and sports-readiness activities
- Gradual Return to Sports

**COMPLETE RESOLUTION OF SYMPTOMS TAKES TIME AND PATIENCE**
